PROJECT DESCRIPTION

Problem: Everyone knows that text does not contain enough emojis 😟

Solution: We made a bot to replace your words with emojis 🤠

The **SCOPE** of this project included making a bot to interact real-time with Discord messages within servers. We explored options for hosting the bot although we do not plan to continue supporting it. The **OUTCOME** reflected our expectations of bot functionality, although there are definitely some features we would have explored if they had fit into our scope.
